

INVITATION

as part of the Gravitational Physics
Lunch Seminar

to the talk by

Helmut RUMPF
(University of Vienna)

on

“What is really tested in gravitationally mediated entanglement experiments?”

Abstract:

Recently it was proposed that GME experiments may probe linearized gravity only as a quantum controlled field and not as a quantum field theory. I will argue that the concept of a relativistic quantum controlled field is fundamentally flawed because of causality violation.

Quantum control is also implicit in a recent path-integral description of those experiments, which casts doubt on its validity beyond the Newtonian approximation.

Time: Tuesday, 1 April 2025, 1:00p.m.

Location: Seminar Room A, Währinger Straße 17, 1090 Vienna, 2nd floor
